

# Energy Industry Doctorates .....Industry Partners Wanted !

## Support a PhD at one of Scotland's leading Universities

The Energy Technology Partnership (ETP) is an alliance of Scottish Universities engaged in world class energy related research and development. With around 250 academics and 600 researchers, it is one of the largest, most broad-based power and energy research partnerships in Europe.

ETP has investment to part-fund fifty energy industry doctorates (PhDs) in renewable/low carbon energy. 25 of these were awarded in 2010 and a further 25 are available in 2011.

These are across a range of areas, including; wind; marine; solar; bio-energy; energy conversion and storage; power systems and networks; energy utilization in buildings; carbon capture and storage.

We are seeking industry partners who will work with us to define new projects relevant to your business aims and be prepared to provide a small financial contribution to your project.

Participation in the programme will provide you with a cost-effective means of supporting high quality, applied R&D that is directly relevant to your company's specific development challenges.

ETP is uniquely placed, through its partnership model, to offer project supervision at one or more of our universities.

For further details on the ETP and the doctorate programme, please visit [www.etp-scotland.ac.uk](http://www.etp-scotland.ac.uk)
